

HBW OWNER RESOURCE

Mercury Alarm & No-Start Action Card

Don't guess a beep code. Capture the exact warning, protect the engine and work from safe basics.

ENGINE / HP

SERIAL NUMBER

ENGINE HOURS

NO UNIVERSAL BEEP DICTIONARY

Alarm meanings vary by engine family, calibration and instrumentation. SmartCraft text and the serial-number manual control. Record the exact pattern and display message.

Stop now

- Fire, smoke, fuel leak or strong raw-fuel smell.
- Loss of steering or control.
- Overheat, oil-pressure warning or a display instruction to stop.
- Severe knocking, grinding, new vibration or a propeller / gearcase strike.
- Water intrusion, electrical arcing or a battery getting hot.

Safe first checks

- ☐ Shift fully to neutral and confirm the lanyard clip is seated.
- ☐ Check the battery switch and look for loose or badly corroded main connections.
- ☐ Confirm fuel level. Check the vent or primer only if your system uses one.
- ☐ Read the display and manual. Don't keep restarting to see if the warning clears.
- ☐ Use emergency services first if people, fuel or fire are at risk.

No-start record

- ☐ Does it crank normally, crank slowly, click, or do nothing?
- ☐ What does the display show before and during cranking?
- ☐ When did it last run normally? What changed since then?
- ☐ Fuel grade, age, ethanol label and recent storage history.
- ☐ Don't flatten the battery with repeated cranking.

Send HBW

- ☐ Engine serial number and hours.
- ☐ Exact display wording, alarm pattern and warning lights.
- ☐ A safe photo or short stationary video.
- ☐ Fuel, battery, impact and recent-service history.
- ☐ Where the boat is and whether it can come to Gores Landing.

Need Mercury diagnosis?

Submit the facts once at hbw.wiki/service. We'll start with the exact engine, not a generic beep-code chart.
