

HBW OWNER RESOURCE

Fall Storage & Winterization Checklist

Get the fuel, engine, boat and records ready before the Kawarthas freeze-up.

BOAT

ENGINE / HP

SERIAL NUMBER

Before the appointment

- ☐ Submit the serial number, engine hours, fuel history and known concerns.
- ☐ Identify maintenance due now, not just the word winterize.
- ☐ Remove valuables, food and personal items. Confirm what the storage facility accepts.
- ☐ Record existing damage and take photos of the boat, motor and trailer.
- ☐ Leave keys, wheel-lock key and required manuals as arranged.

Fuel and engine

- ☐ Follow the storage section in the manual matched to the engine serial number.
- ☐ Start with suitable fresh fuel. Treat and circulate it exactly as directed.
- ☐ Don't assume ethanol-free fuel can sit forever. It still oxidizes and collects water.
- ☐ Complete due oil, filters, gear-lube, corrosion protection and model-specific internal protection.
- ☐ Store the outboard in the drainage position specified by Mercury, commonly vertical or full-down.

Boat and systems

- ☐ Drain freshwater, livewell, washdown, bilge and sanitation systems as applicable.
- ☐ Clean and dry the bilge. Check the drain plug and cover drainage plan.
- ☐ Protect canvas, upholstery and electronics from moisture and pests.
- ☐ Confirm battery disconnect, removal or maintainer plan with the battery instructions.
- ☐ Inspect hull, transom, propeller, gearcase, anodes and steering while defects are visible.

Keep the record

- ☐ Date and engine hours at layup.
- ☐ Fuel grade, ethanol label, date and stabilizer product / amount.
- ☐ Parts, fluids and specifications used.
- ☐ Work completed and anything deferred to spring.
- ☐ Receipts, photos and next service due.

Want HBW to handle it?

Send the boat, engine and storage details through the service intake. We'll confirm the scope instead of guessing from a generic package name.
